Overview

StudyPet is a Command Line Interface (CLI) based study companion system that helps students maintain consistent study habits using gamification and emotional engagement.

1

User Access

Users can securely register and log in to track their study progress over time.

2

Goal Setting

Daily study goals help users stay focused and build consistent study habits.

3

Pomodoro Study

Structured Pomodoro sessions improve productivity through timed study and breaks.

4

Virtual Pet

A virtual pet reflects the user's study consistency through its health and mood.

5

Reward System

Users earn rewards by completing study sessions, boosting motivation and discipline.

Originally Proposed Features

Account creation and personalization

Virtual pet with health, coins, mood, and personality

Pomodoro-based study sessions

Feeding and pet shop system

Mood tracking and emotional feedback

Inactivity penalty system

Study analytics, reports, and visualizations (advanced)

Quiz-based performance prediction (advanced)

User Management & Logging

A simple user registration and login system with input validation (numeric ID, required fields), persistent user data stored in JSON, and study sessions recorded in `study_log.json`.

Pet System

A virtual pet system with theme and personality selection, health and coin tracking, ASCII status display, and health warnings.

Study System

A study session system with validated topic selection, multiple difficulty levels with coin rewards, Pomodoro-style timers, DEV_MODE for testing, and health/coin rewards after completion.

Feeding & Shop

A pet food system with normal and premium options, coin-based purchases, health restoration, and feeding/shop logic.

Mood & Engagement

A daily mood check-in system that stores mood, provides motivational messages, and updates user data.

Inactivity Penalty

An inactivity system that detects 7 day inactivity, applies health reset and coin penalty, and shows a login warning.

Features Still In Progress

Study analytics and
heatmap visualization

Weekly performance
reports

Quiz marks input and
performance prediction

Mood-based long-
term health impact

Recreational mini-games
and stress-relief features

Advanced animations
(CLI-based)

Project Timeline During Proposal
